Bhubaneswar, India

Summary

Full-stack developer shipping production web and data systems in TypeScript, Next.js, and PostgreSQL. Published npm CLIs for code auditing and Postgres RLS verification.

Experience

Giakaa Capital May 2026 – Present
Full Stack Software Developer Remote

- Build and ship full-stack features in Next.js, TypeScript, PostgreSQL/Supabase, and ClickHouse across web, API, and analytics layers.
- Develop backend APIs and background job processing on Google Cloud Platform, with authentication, role-based access control, caching, and dashboard data pipelines.
- Debug production incidents, optimize SQL queries, and clear performance bottlenecks in live services, verifying fixes with tests and staged rollouts.

uElement Technologies Jan 2026 – May 2026
Software Developer Intern Remote

- Built Next.js applications with modular backend design and performance-focused rendering.
- Integrated smart contract interactions and transaction monitoring into production systems.

Projects

Codebase Doctor – Repository Auditor for Humans and Coding Agents
TypeScript, Node.js, MCP, SARIF · npm | GitHub

- Published npm CLI and MCP server with a full test suite; CI verifies each release from the packed tarball. Audits secrets (working tree and Git history), dependencies (npm/pnpm/Yarn/Bun + OSV advisories), PostgreSQL RLS, Dockerfiles, and GitHub Actions.
- Builds a multi-language source graph across JS/TS, Python, Go, Java, and Rust for impact analysis; reports stable fingerprints with baselines in text, JSON, or SARIF so CI separates new issues from known ones.

RLS Doctor – Postgres and Supabase Row Level Security Auditor
TypeScript, PostgreSQL, Supabase · npm | GitHub

- Published npm CLI that audits RLS policies, grants, and role-membership paths from live catalog metadata; ships SARIF output, baselines, and a GitHub Action for pull-request checks.
- Probe mode impersonates application roles in rolled-back read-only transactions, including simulated JWT users, to prove cross-tenant row reads without changing the database.

Tarka Sabha – Multi-Agent AI Debate Platform
Next.js, TypeScript, PostgreSQL, Prisma · Live | GitHub

- Multi-agent debate platform routing multiple LLM providers with configurable personas; API keys encrypted with AES-256-GCM with model calls kept server-side.
- Persists auth-backed debate state (chats, messages, rate limits) in PostgreSQL/Prisma with deterministic round-robin and mention-aware speaker selection.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, Java, C++, Rust, Solidity
Frontend & Backend: React, Next.js, Tailwind CSS, Node.js, Express, REST APIs, PostgreSQL, Prisma, MongoDB
AI & LLM: OpenAI, Anthropic, and Gemini APIs, AI SDK, LLM tool-calling, MCP (Model Context Protocol)
DevOps & Cloud: Docker, GitHub Actions, Linux, CI/CD, Vercel, Railway
Blockchain & Web3: Ethereum, Solidity, Hardhat, Ethers.js, Internet Computer (Motoko)

Education

Centurion University of Technology and Management, Bhubaneswar Oct 2022 – Apr 2025
Bachelor of Computer Applications CGPA: 8.9
